

Knäblein: Modern Biopharmaceuticals (3-527-31184-X)  
ET 25.8.05

"...an impressive compilation of outstanding results written by brilliant, creative thinkers who are shaping present and future biotechnology. I am pleased to recommend strongly this complete and comprehensive basic reference source for this new, exciting field to biotechnologists, clinicians, physicians, pharmacists, pharmaceutical chemists, molecular biologists, medicinal chemists, and anyone working in the biotechnological and pharmaceutical industries or in medicinal institutes. It should also be invaluable to undergraduate and graduate students, postdoctoral fellows, and researchers looking for quick, clear, and concise ideas on topics that lie outside their areas of expertise. It also belongs in academic, industrial, and governmental libraries."

George B. Kauffman, California State University, Fresno  
The Chemical Educator, 3/2006
